

CA-IS376x High-Speed Six-Channel Digital Isolators

1. Features

- **Data Rate: DC to 150Mbps**
- **Accepts 2.5V to 5.5V Supplies**
- **Wide Operating Temperature Range: -40°C to 125°C**
- **Default Output High (CA-IS376xHB) and Low (CA-IS376xLB) Options**
- **No Start-Up Initialization Required**
- **$\pm 50 \text{ kV}/\mu\text{s}$ typical CMT**
- **Low Power Consumption**
 - 1.5mA per channel at 1Mbps with $V_{DD} = 5.0\text{V}$
 - 6.6mA per channel at 100Mbps with $V_{DD} = 5.0\text{V}$
- **Best in Class Propagation Delay and Skew**
 - 12ns typical propagation delay
 - 1ns pulse width distortion
 - 2ns propagation delay skew (chip -to-chip)
 - 5ns minimum pulse width
- **Up to 3.75kV_{RMS} isolation rating**
- **High lifetime: >40 years**
- **Three-state input with enable port**
- **Schmitt trigger inputs**
- **Narrow-body SSOP16(B) Package**
- **Safety regulatory approvals**
 - VDE certification according to DIN EN IEC 60747-17(VDE 0884-17):2021-10
 - UL certification according to UL 1577
 - CQC certification according to GB4943.1-2022
 - TUV certification

2. Applications

- Industrial Automation
- Motor Control
- Medical Systems
- Isolated Power Supplies
- Solar Inverters
- Isolated ADC, DAC

3. General Description

The CA-IS376x devices are high-performance six-channel, unidirectional digital isolators with up to 3.75kV_{RMS} isolation rating and ultra-fast data rate. The CA-IS376x devices offer high electromagnetic immunity and low emissions at low power consumption while isolating different ground domains and block high-voltage/high-current transients from sensitive or human interface circuitry. Each isolation channel has a logic input and output buffer separated by capacitive silicon dioxide (SiO₂) insulation barrier, the integrated Schmitt trigger on each input provide excellent noise immunity.

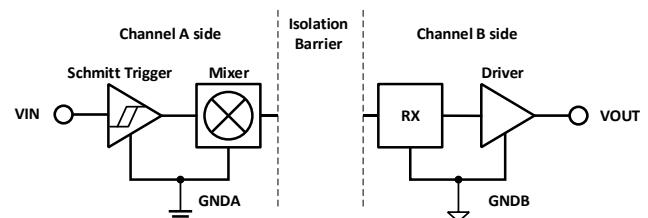

The CA-IS376x family offers all possible unidirectional channel configurations to accommodate any 6-channel design digital I/O applications, especial for the multiple SPI devices isolation. The CA-IS3760 features six channels transferring digital signals in one direction; The CA-IS3761 device has five forward and one reverse-direction channels; The CA-IS3762 device offers four forward and two reverse-direction channels; The CA-IS3763 provides further design flexibility with three channels in each direction. All devices of this family feature default outputs. When the input is either not powered or is open-circuit, the default output is low for devices with suffix L and high for devices with suffix H, see the Ordering Information for suffixes associated with each option.

The CA-IS376x series devices are specified over the -40°C to +125°C operating temperature range and are available in 16-pin SSOP narrow body package.

Notes:

- This coupler is suitable for “safe electrical insulation” only within the safety ratings. Compliance with the safety ratings shall be ensured by means of suitable protective circuits.
- Devices are immersed in oil during surge characterization test.
- The characterization charge is discharging charge (pd) caused by partial discharge.
- Capacitance and resistance are measured with all pins on field-side and logic-side tied together.

8. Parameter Measurement Information

Notes:

1. A square wave generator provide V_{IN} input signal with the following characteristics: frequency $\leq 100\text{kHz}$, 50% duty cycle, $t_r \leq 3\text{ns}$, $t_f \leq 3\text{ns}$, $Z_{out} = 50\Omega$. At the input, 50Ω resistor is required to terminate input generator signal. It is not needed in actual application.
2. $C_L = 15\text{pF}$ and includes external circuit (instrumentation and fixture etc.) capacitance. Since the load capacitance influence the output rising time, it's a key factor in the timing characteristic measurement.

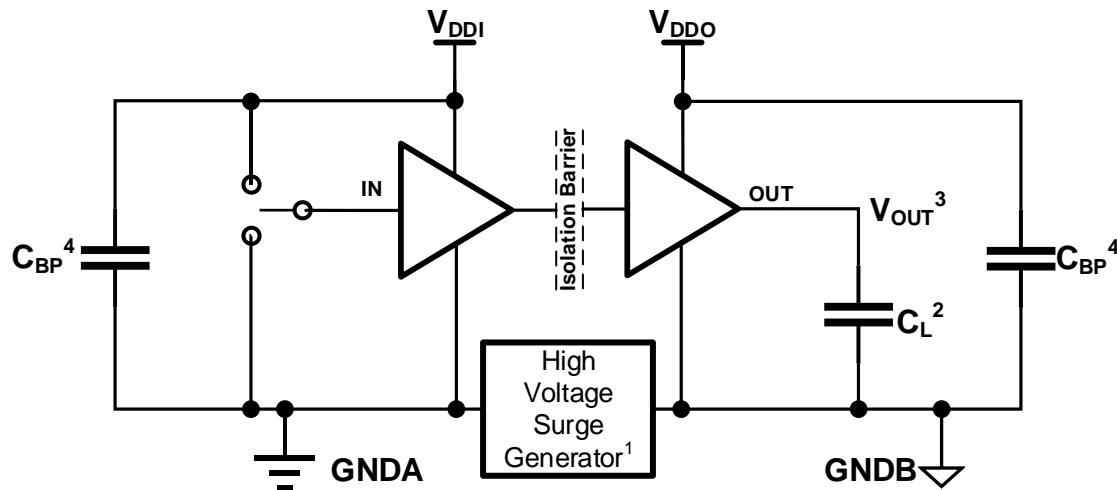

Figure 8-1. Switching Characteristics Test Circuit and Voltage Waveforms

Notes:

1. Power Supply Ramp Rate = 10 mV/ns. V_{DDI} should ramp over 2.375V, and less than 5.5V.
2. $C_L = 15\text{pF}$ and includes external circuit (instrumentation and fixture etc.) capacitance. Since the load capacitance influence the output rising time, it's a key factor in the timing characteristic measurement.

Figure 8-2. Default Output Delay Time Test Circuit and Voltage Waveforms

**Notes:**

1. The High Voltage Surge Generator generates repetitive high voltage surges with $> 1\text{kV}$ amplitude, rise time $<10\text{ns}$ and fall time $<10\text{ns}$, to reach common-mode transient noise with $> 150\text{kV}/\mu\text{s}$ slew rate.
2. $C_L = 15\text{pF}$ and includes external circuit (instrumentation and fixture etc.) capacitance.
3. Pass-fail criteria: the output must remain stable.
4. C_{BP} ($0.1 \sim 1\mu\text{F}$) is bypass capacitance.

9. Detailed Description

9.1. Overview

The CA-IS376x are a family of six-channel digital galvanic isolators using Chipanalog's full differential capacitive isolation technology. These devices have an ON-OFF keying (OOK) modulation scheme to transfer digital signals across the SiO₂ based isolation barrier between circuits with different power domains. The transmitter sends a high frequency carrier across the barrier to represent one digital state and sends no signal to represent the other digital state. The receiver demodulates the signal and recovery input signal at output through a buffer stage. With this OOK architecture, CA-IS376x family of devices build a robust data transmission path between different power domains without any special start-up initialization requirements. These devices also incorporate advanced full differential techniques to minimize the radiated emissions due the high frequency carrier and IO buffer switching.

9.2. Functional Block Diagram

The conceptual block diagram of a digital capacitive isolator, Figure 9-1, shows a functional block diagram of a typical channel; Figure 9-2 shows the operating waveform of a typical channel. Each channel of the CA-IS376x is unidirectional, only passes data in one direction as indicated in the functional diagram. Each device of this family features six unidirectional channels that operate independently with guaranteed data rates from DC up to 150Mbps.

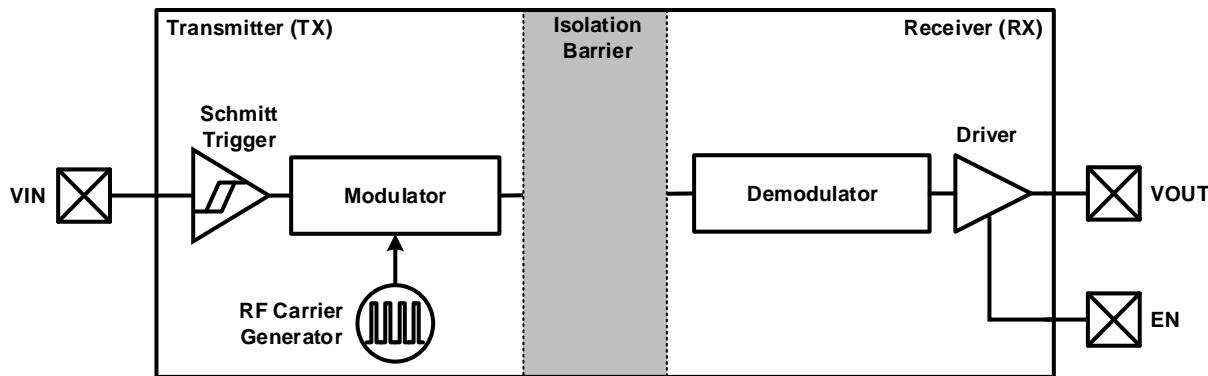

Figure 9-1. Functional Block Diagram of a Single Channel

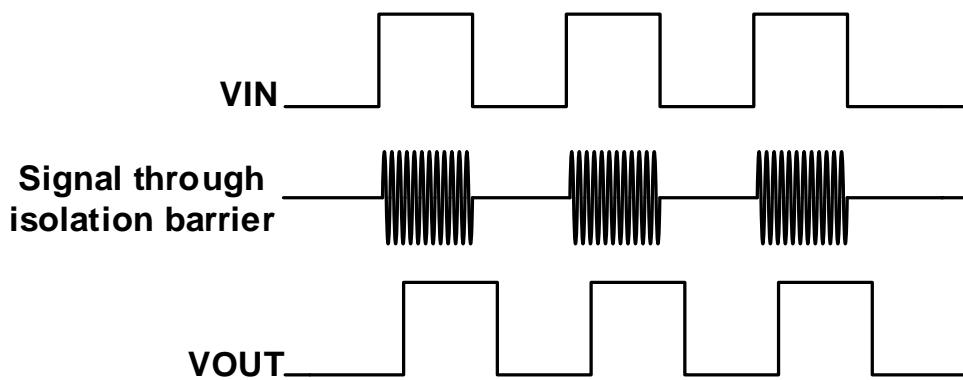

Figure 9-2. Conceptual Operation Waveforms of a Single Channel

9.3. Device Operation Modes

Table 9-1 lists the operation modes for the CA-IS376x devices.

Table 9-1. Operation Mode

V_{DD1}^1	V_{DD0}^1	INPUT (Ax/Bx) ²	OPERATION
PU	PU	H	Normal operation mode: Each channel output follows the logic state of its input.
		L	
		Open	Default output mode: When input V_{Ix} is open, the corresponding channel output goes to its default logic state. Default is High for CA-IS376xH and Low for CA-IS376xL.
PD	PU	X	Default output mode: When V_{DD1} is unpowered, a channel output assumes the logic state based on its default option. Default is High for CA-IS376xH and Low for CA-IS376xL.
X	PD	X	If the output side V_{DD0} is unpowered, a channel output is undetermined. ⁴

Notes:

- V_{DD1} = Input-side supply V_{DD} ; V_{DD0} = Output-side supply V_{DD} ; PU = Powered up ($V_{DD} \geq V_{DD(UVLO+)}$); PD = Powered down ($V_{DD} \leq V_{DD(UVLO-)}$); X = Irrelevant; H = High level; L = Low level; Z = High Impedance.
- A strongly driven input signal can weakly power the floating V_{DD} through an internal protection diode and cause undetermined output.

10. Application and Implementation

Unlike optocouplers, which require external components to improve performance, provide bias, or limit current, the CA-IS376x devices only require two external bypass capacitors to operate. To reduce ripple and the chance of introducing data errors, bypass $VDDA$ and $VDBB$ pins with $0.1\mu F$ to $1\mu F$ low-ESR ceramic capacitors to GND_A and GND_B respectively. Place the bypass capacitors as close to the power supply input pins as possible. The CA-IS37xx input is compatible with TTL levels, absorbs only microampere input leakage current, and can be driven without an external buffer circuit. The output resistance is 50Ω (rail to rail output) and forward and reverse channel configurations are available. Figure 10-1 shows typical operating circuit of the CA-IS37xx series products.
